One tool to cut them all

One cutting tool for a variety of materials

Anyone who often switches between different materials during cutting work understands the problem: constant tool changes, multiple drives and often the worry that the disc might not be right for the material. With the new Multi Power Carbide Wheel, PFERD TOOLS can now offer the perfect solution to this very problem. One tool that can cut a wide range of materials, such as plastics, non-ferrous metals and drywall materials, quickly, cleanly and safely without the user having to change the cutting tool.

The cutting edge, made of sharp carbide grain, ensures safe and clean cuts, while the robust “Made in Germany” construction stands for a long service life. Workers will benefit from fewer tool changes, increased work speed and safe handling.

The Multi Power Carbide Wheel is suitable for standard angle grinders with a 22.23-mm arbor and provides a reliable solution wherever different materials need to be cut efficiently and cleanly.
